

METHOD AND SYSTEM FOR INTEGRATING RECORDED MATERIAL WITH ELECTRONIC PROGRAMMING GUIDE

Abstract Of The Invention

5 A method and system provides an extended electronic program guide that
generates at least one recorded material database of recorded material and that generates
a live stream database (or uses a pre-generated live stream database) of live stream data.
The live stream database and the recorded material database are integrated to produce an
extended electronic program guide. The recorded material can be time shifted data of a
10 predetermined live data stream or can be material derived from a source of digital data.
